Virtuelco platform testing report

Erasmus+ project “Virtuelco for All”,

Date / Time / Duration
20 March 2026, 16 pm, 1 hour
Testing with:
Students of the third year of the educational profile Financial accounting technician
Olivera Stošić, Teacher and Coordinator of the Project,
Place: Economic school “V. Karadžić”, Velika Plana, Serbia
Purpose: Platform functionality check

Summary:

The testing report for the Virtuelco platform was compiled following a practical session with students on the subject of payroll accounting.

Within the newly developed module of the platform, a payroll accounting feature has been established. The training was conducted in two phases: students first generated monthly payroll summaries, followed by the entry of employee data and the processing of payroll for January and February.

Students individually performed the calculations and verified the accuracy of the data directly on the platform. The feedback was highly positive regarding the generated documentation, and the students successfully mastered payroll accounting through these practical, concrete examples.

Testing reported by coordinator of the Aurora team:

Olivera Stošić
